

Inhaled Oxytocin Update

Pete Lambert

20 March 2018

RHSC General Assembly 2018

Inhaled Oxytocin

- Objective: A simple to use, affordable and heat stable oxytocin dry powder for the prevention of postpartum haemorrhage
 - Single dose equivalent to 10IU IM injection
 - Treatment indication to follow (subject to data)
- Clinical Development: Phase II clinical trial ongoing (UK)
 - PK trial in women in third stage labour (vs 10IU IM)
 - Positive data will support streamlined clinical path to registration
- Product Manufacture: Scale-up of manufacturing processes ongoing
 - Support late-stage clinical trials/ commercial supply
- Implementation Research: Detailed analytical program of target territories to prioritise countries and develop program for product introduction
