Update from the Accountability Workstream

Vicky Boydell, 11th October 2016
Why Accountability Learning Objective

• Factors that cause supply shortfalls remains a challenge - how much of the problem is under-resourcing, procurement problems, inefficiency in delivery systems, bias in distribution vs. leakage?

• Methodologies and interventions developed in the transparency, participation and accountability (TPA) field to improve effective service delivery provide a new ways to tackle these questions.
Our Definition of Accountability

Accountability is a process to ensure that governments, donors, the private sector, and civil society fulfil their obligations regarding the delivery of reproductive health supplies.

It is about citizens holding their leaders and governing institution to account for delivering commitments. This includes formal processes (such as elections, hearings, consultations) or bottom-up strategies (such as participatory budgeting, social mobilization, and citizen monitoring). It is a process of awareness raising, monitoring and enforcement.
Learning Objectives:

Overall: To ensure A&A WG members have access to the learnings from TPA and how it is relevant and applies to RH supplies. With the aim to disseminate more broadly in the RHSC.

1. To develop a shared understanding/definition of accountability and explore how it applies to reproductive health supplies; including sharing undocumented activities underway already such as mHealth.

2. Identify emerging practices and learnings from TPA that contribute to and strengthen supply chain

Accountability work on RH Supplies globally and in countries, will aim to contribute to the overarching goal of:

Ensuring equitable access to a broad-range of affordable, quality assured, and sustainable FP/RH supplies and services

---

**Inputs**

- Partnership with American University’s Transparency, Participation and Accountability (TPA) initiative
- Regular workstream calls and annual meeting participation by members
- Identification of learning opportunities by RHSC members
- Knowledge Gateway platform for sharing resource materials

**Outputs**

- Applicable TPA principles to enhance RH supplies advocacy identified
- Experiences captured and shared by members and the governance and greater health supplies communities about accountability
- Annual meeting sessions on accountability to share learning with members
- Archived resource materials on Knowledge Gateway site

**Near-Term Outcomes**

- RHSC members have a better and shared understanding of TPA through resource materials
- Relationship building and information sharing with governance and greater health supplies communities

**Longer-Term Outcomes**

- Collaboration among RHSC members and governance and greater health supplies communities to improve governance in supplies at key points
- Integration of RH supplies linkages into health governance and greater health supplies communities’ advocacy agendas

**Impact**

- Strengthened demand for TPA as it relates to RH supplies

---
Learning Exchange

How the insights from TPA could inform new initiatives to diagnose and address both supply chain issues and implementation challenges that limit citizens’ full, free and informed contraceptive choice.

Objectives:

• Share analytical insights, key concepts and practical developments from both transparency, participation and accountability and the reproductive health systems, including commodity security;

• Learn from experiences with addressing issues of supply chain challenges in various sectors

• Identify research gaps and/or questions for addressing the monitoring challenges involved in tracking the determinants of access to contraceptive services;
Key Takeaways from the Exchange

- Conceptual and Methodological Shifts Required
- Politicizing RH Supplies
- Reframing existing resources
- Anticipated challenges of applying transparency/accountability strategies to reproductive health delivery systems
New Developments

- Power Mapping of supply chain
- Equity Analysis of Supplies by type
An optional slide, to be used for conclusions, quotes, etc.
