

Adolescent contraceptive use

DATA FROM L'ENQUÊTE DÉMOGRAPHIQUE ET DE SANTÉ DU GABON (EDSG), 2012

Adolescent population: who are they?

In the Gabonese Republic, there are **372 000** adolescents aged 10–19 years – **21.2%** of the country's total population.ⁱ Most adolescents live in urban areas, **88.4%** of adolescent girls and **88.9%** of adolescent boys.ⁱ

By age 19, the mean number of years of schooling attended by adolescent girls is **9.0**, while for adolescent boys it is **8.5**.ⁱⁱ Among adolescents who become parents before age 20, the average age at which Gabonese adolescent girls have their first baby is **16.8** years, while the average age at which adolescent boys first become fathers is **18.1**.ⁱⁱ

Sexual activity and marital status

Analysis of data from the EDSGⁱⁱ shows that about **90 000** Gabonese aged 15–19 are currently sexually active – they are either unmarried and have had sex in the last three months or they are in a union (i.e. married or living together). On average, among adolescents who had sex before age 20, adolescent girls first have sexual intercourse at age **16.1** years and adolescent boys at **15.4** years.

Among unmarried adolescents, **59.2%** of adolescent girls report ever having sex and **42.4%** are currently sexually active; among adolescent boys, **70.5%** report ever having sex, while **45.1%** are currently sexually active.

Among all Gabonese adolescents, **13.5%** of adolescent girls and **1.4%** of adolescent boys are in a union. Among these adolescents, the mean age of the first union is **16.6** years for adolescent girls and **17.3** for adolescent boys.

What can be done to support Gabonese adolescents to prevent unintended pregnancy?

Plan for how, when and where different groups of sexually active adolescents (married and unmarried, boys and girls, rural and urban) use and do not use contraception.

Learn the reasons why adolescents are not using contraception, and develop policies and programmes to better address their needs.

Understand that adolescents may get contraception from a variety of sources and ensure that each of these sources can provide high quality services for adolescents.

Contraceptive use and non-use among adolescent girls

Unmarried, sexually active

According to EDSDGⁱⁱ analyses, **79.8%** of unmarried, sexually active adolescent girls report not wanting a child in the next two years, yet only **65.1%** of them are currently using any method to prevent pregnancy. The main reasons these adolescents report for not using a contraceptive method include:

- **infrequent sex (27.6%)**
- **not married (11.4%)**
- **fear of side-effects or health concerns (10.6%)**

Among all unmarried, sexually active adolescent girls aged 15–19, **39.4%** are not using a method of contraception. Male condoms are the most common modern method used (**48.8%** of these adolescent girls). Implants, which are considered to be one of the most effective methods, are used by **0.2%**. Traditional methods (withdrawal or periodic abstinence) are used by **9.4%** of these adolescent girls (see Figure 1).

Source: analysis of EDSDG 2012ⁱⁱ

LISTED FROM LEAST EFFECTIVE TO MOST EFFECTIVE

Unmarried, sexually active adolescents who are using a modern method most often get it from a **pharmacy (40.7%)** or a **private facility (37.9%)**.

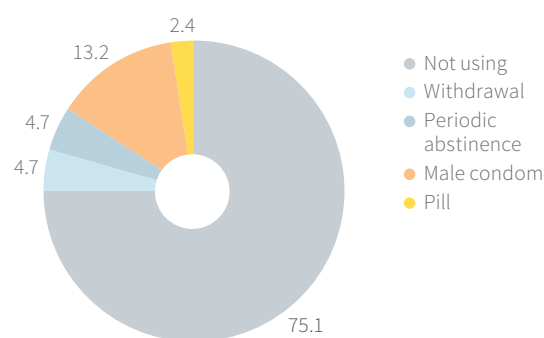

In union

According to EDSDGⁱⁱ analyses, **52.4%** of adolescent girls in a union report not wanting a child in the next two years, yet only **30.6%** of them are currently using any method to prevent pregnancy. The main reasons these adolescents report for not using a contraceptive method include:

- **breastfeeding (19.3%)**
- **not having sex (10.4%)**
- **fear of side-effects or health concerns (9.9%)**

Among all adolescent girls in a union aged 15–19, **75.1%** are not using a method of contraception. Male condoms and pills are the only modern methods used (**13.2%** and **2.4%** of these adolescent girls, respectively). Traditional methods (withdrawal or periodic abstinence) are used by **9.4%** (see Figure 2).

FIGURE 2. Use and non-use of contraception: adolescent girls in union, aged 15–19 years (%)

Source: analysis of EDSDG 2012ⁱⁱ

LISTED FROM LEAST EFFECTIVE TO MOST EFFECTIVE

Adolescents in a union who are using a modern method most often get it from **friends (43.1%)** or a **pharmacy (42.4%)**.

METHODS:

-  Not using
-  Withdrawal
-  Periodic abstinence
-  Rhythm/calendar
-  Female condom
-  Male condom
-  Standard days/cycle beads
-  Pill
-  Injectable contraceptives
-  Lactational amenorrhea (LAM)
-  Implants
-  IUD
-  Male sterilization
-  Female sterilization

REASONS FOR NON-USE:

-  Not married
-  Not having sex
-  Infrequent sex
-  Menses has not returned after birth
-  Breastfeeding
-  Fatalistic (up to god)
-  She is opposed
-  Husband/partner is opposed
-  Religious prohibition
-  Knows no method
-  Knows no source
-  Fear of side effects/health concerns
-  Inconvenient to use
-  Others opposed
-  Lack of access/too far

SOURCE OF METHOD:

-  Government facility
-  Private facility
-  Pharmacy
-  Shop
-  Friends or parents
-  Other
-  Community Health Worker
